Subject: CT-PET at Flinders Medical Centre

To whom it may concern

Can I feedback to the 20 year State Infrastructure Strategy Discussion Paper re the need for a CT-PET scanner at Flinders Medical Centre. CT-PET scanning is a standard of care in staging oesophago-gastric cancer. Flinders Medical Centre is the highest volume hospital when it comes to managing these complex cancers. Despite this, all patients with oesophago-gastric cancer requiring a CT-PET scan are sent to facilities on North Terrace. As the busiest oesophago-gastric cancer unit in the busiest hospital in the state, it would seem more equitable that patients from the southern suburbs had proximate access to a CT-PET scanner

Yours
